

Formation of Interdisciplinary Teams in Engineering Capstone Courses using a Project Fair Format

Matthew Swenson, Michael Maughan, Dan Cordon, Edwin Odom, Steven Beyerlein

University of Idaho
College of Engineering

Objective

Create a coordinated approach for systematically forming interdisciplinary student teams and matching them with sponsored capstone projects.

Introduction & Background

The University of Idaho has an interdisciplinary engineering capstone program with:

- Mechanical engineering
- Electric and computer engineering
- Biological engineering
- Computer science

A large coordinated effort is required to:

- Recruit sponsored projects
- Introduce project options to the students
- Assign interdisciplinary teams to projects with specific needs

Historically

Interdisciplinary projects are recruited, then... at the beginning of the capstone cycle, each project has a representative give a brief (~5 min) oral presentation in class, outlining the project synopsis

Pros:

- Every student learns about each project
- Every project is given ~equal exposure

Cons:

- Takes ~1.5 weeks to present all project options
- Students must attend all presentations, even if there is not a disciplinary match
- No opportunity for one-on-one interaction

Methodology and Implementation in 2017-2018

Project Recruiting

Sources of projects:

- External industry partners
- Internal departmental research
- On-campus departments outside of engineering

For each project:

- Determine ideal size and mix of interdisciplinary students
- Keep a running tally of total student disciplinary needs

For the 2017-2018 capstone cycle:

- 42 projects were recruited as candidates
- 25 projects needing interdisciplinary mix of students
- Total student need was ~16% higher than overall enrollment

2017-2018 UI Capstone Cycle	ME	CompE	EE	CS	BE	Total
Total # of projects recruited				42		
Total # of interdisciplinary projects				25		
Project student needs	69	17	40	33	14	173
Actual enrolled students	58	6	33	32	11	140
% over-recruited	19%	183%	21%	3%	27%	16%

Project Fair

Students are provided advanced information (synopsis) for each project option

Format: one-day event, similar to a traditional Career Fair (1.5 hours)

- Booths representing each project
- Representatives for each project attends, and
 - Presents the project using posters, videos, and physical hardware
 - Answers questions from students about the project

Student Assignments:

Before the Project Fair:

- 1) Preview each project synopsis
- 2) Identify projects of interest
- 3) Compile a list of questions for the representatives

After the Project Fair:

- Submit a Project Bid Portfolio with
- A) Top 4 project preferences
 - B) 1-page resume
 - C) Relevant personal information

Team Formation

(conducted by faculty)

Results:

- 34 Projects Assigned
- 23 Externally sponsored projects
- 18 interdisciplinary projects

Observations:

- Over-recruiting of projects adds flexibility and makes the project bid process more competitive.
- Over half of the projects are interdisciplinary
- External sponsor presence at the career fair leads to → high student interest

Summary & Next Steps

- With a 1-day Project Fair event, the team formation process is shortened by 1 full week.
- Project Fair format enables more student-sponsor networking
- Sponsor participation in the Project Fair → higher student interest
- Recruiting a surplus of projects allows more flexibility to:
 - ensure interdisciplinary needs of the project are met
 - ensure students are assigned projects they are interested in
- For future Project Fairs, need to allow more time (up to 2-3 hours) for networking and thorough evaluation of all project options

Acknowledgments: The authors thank all of the interdisciplinary instructors including Feng Li, Herb Hess, James Frenzel, Dev Shrestha, Bruce Bolden, Joel Perry, Behnaz Rezaie, and Bill Magnie. This study is generously supported by the University of Idaho College of Engineering and numerous external capstone project sponsors.
